

Circular economy principles

Waste becomes a resource: is the main feature. All the biodegradable material returns to the nature and the not biodegradable is reused.

Second use: reintroduce in the economic circuit those products that no longer correspond to the initial consumer's needs.

Reuse: reuse certain products or parts of those products that still work to elaborate new artifacts.

Reparation: find damage products a second life. **Recycle:** make use of materials founded in waste. **Valorization:** harness energy from waste that can't be recycled.
